

Linen & Love

STUDIOS

About Linen

Linen is a brand new luxury portrait studio with 3 unique rooms based in Canada. Their studio is very conveniently located near the intersection of highways 407 and 404 with lots of free, private parking right out front. Each of their beautiful new studio rooms has a unique design with lots of thoughtful details that are complemented with hand-selected, luxury designer furniture and accents

Features and requirements

1. User management
 - I. Admin will create users
 - II. managers and assign roles and locations to them
 - III. Authorization

 - III. User dashboard
 - IV. Booking page
 - i. Generate bookings slots based on day and time according to the user's calendar
 - ii. Block from multiple location booking
 - iii. Calculate prices, tax, discount, and points

My role in Linen

I was assigned as a full-time full-stack developer to design and build the entire application. I also had the freedom to choose the technologies and frameworks, so I selected Laravel for the backend and React with MUI for the frontend. However, due to a confidential agreement with the client, I cannot provide information about the features and packages that I have not mentioned above.

My responsibilities

- Project planning from the beginning to completion, such as technologies, frameworks, continuous delivery, bug fixing, version control (GIT), and others
- Transform requirements into smaller tasks and allocate deadlines to myself.
- Collect and assess client feedback.
- Verify and deploy the application
- Integrate software components and third-party programs, such as a payment gateway.

Key points that I've used to make this project successful

- Break down the requirements into smaller tasks.
- Split the user interface into smaller components to enhance reusability.
- Adhere to and implement the best coding practices and standards, such as ECMAScript, PSR, and the DRY (Don't Repeat Yourself) principle.
- Continuously assess the client's feedback whenever a task or feature is completed.
- Offer clients the freedom to make decisions and choices, rather than imposing my decisions on them.
- Provide advice and suggestions to the client for improvement, such as new features, enhancements to existing features, and ideas for improving UI/UX
