

WiserMarket

About WiserMarket

Wiser Market is dedicated to safeguarding brands in the ever-evolving eCommerce environment. With a background deeply rooted in eCommerce, we recognize the vast opportunities that online trading offers, coupled with the inherent risks it presents

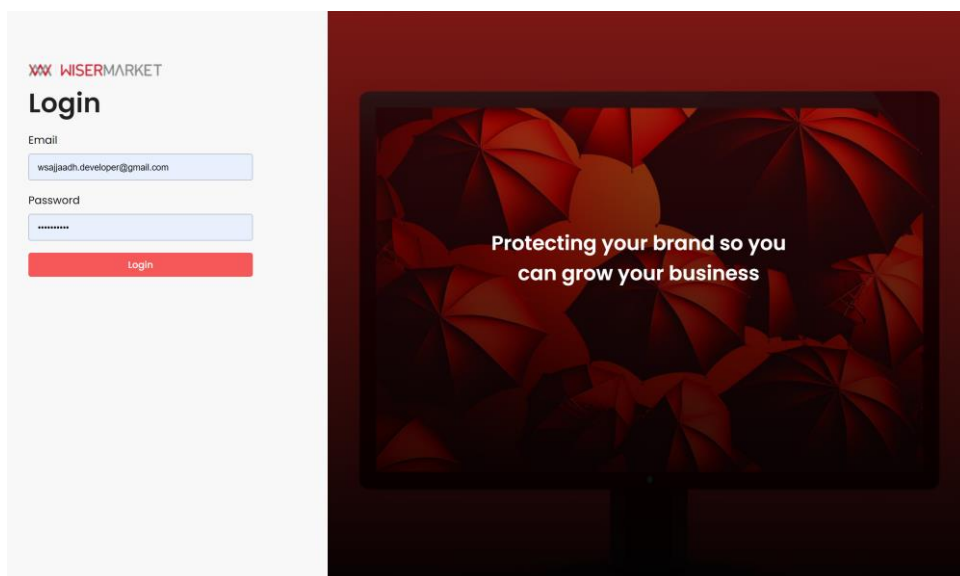

Features and requirements

1. Research
 - I. The user will input URLs (e.g., Amazon, eBay, Walmart, etc.), and the system will utilize the product information to search across the web, checking for any damage or misuse of the product/brand name.
 - II. The user has options regarding what to do if the system identifies the misuse of the product/brand, and additional details can be provided as needed.
2. Enforcement
3. Logs
4. API Development with documentation (Swagger)
5. Idle detection and reauthorize
6. Resizable and editable table

My Role and Accomplishments at WiserMarket

I was contracted as a React Developer for a challenging project with a 3-month timeline. The main challenge involved rendering a table with editable inputs and resizable rows and columns without compromising speed. Overcoming rendering issues, I successfully delivered a smooth application within just 2 months. As a testament to the project's success, I was rehired to work on the backend, although, due to a nondisclosure agreement (NDA), I am unable to share details beyond three sections of the app through screenshots, and no information about the backend is disclosed.
