

OB Express Admin

About OB Express

OB Express is a technology platform designed to optimize the process of last-mile delivery through demand matching with service agents to facilitate efficient and effective deliveries. The system is developed using the latest technology and backed by the founder's 35 years of logistics industry experience.

Features and requirements

1. User management
 - I. Admin will create internal staff
 - II. Manage customers and drivers
 - III. Admin will set special rates and discounts for a particular user
2. Order management
 - I. Admin and user can create or modify orders
 - II. Order calculation based on routes
 - III. Different order calculations for unique customers
 - IV. Admin to split and re-create the orders created by unique customers according to business logic
 - V. Notify drivers when a new order is created
3. Wallet management
 - I. Admin handles wallet transactions such as deposit and withdrawal
 - II. Users make deposit and withdrawal requests
 - III. Create a history for all wallet transactions
4. Discount management

My role in OB Express Admin

I was assigned as a Laravel developer to develop an admin panel with API consumed by mobile application. I received technologies and frameworks recommendation from a colleague. Unfortunately, due to a confidential agreement with the client, I cannot give more information (which I did not mention above).

My responsibilities

- Project planning from the beginning to completion, such as continuous delivery, bug fixing, version control (GIT), and others
- Support the entire application lifecycle (concept, design, test, release, and support)
- Convert requirements into small tasks and assign deadlines to me
- Attend weekly meetings whenever required
- Gather specific requirements and suggest solutions
- Write unit and UI tests to identify malfunctions
- Stay up-to-date with new technology trends

Key points that I've used to make this project successful

- Breakdown the requirements into small tasks
- Split the UI into small components for reusability
- Follow and implement best coding practices and standards such as PSR and DRY
- Constantly evaluate the client's feedback whenever a task or feature is completed
- Conduct meetings periodically with clients to provide updates
